

68RFE Transmission Warranty

This Muldoon's Diesel Performance (MDP) transmission rebuild includes a non-transferable, two year unlimited mileage warranty on all workmanship from the date of invoice. For transmissions installed by MDP, the warranty work and labor shall be covered only at our facility. For transmissions not installed by MDP, we will cover up to \$500.00 for the labor to remove and reinstall the unit as well as commercial shipping (arranged by MDP) within the continental United States for one year from invoice date.

This warranty does not cover hard parts, such as shafts, cases, one-way roller clutches, etc. unless it is found that the failure was ultimately caused by poor workmanship. This warranty will be voided if the transmission has been tampered with, is abused or neglected as a result of neutral drops, 17+ PSI power braking, first or second gear lockups, non-MDP installation errors, water damage, overheating or damage caused by loss of fluid due to external leaks. There is no warranty implied on transmissions that do not have pressures checked, coolers flushed or installation by a professional automotive shop.

Any transmission tuning needs to be approved by Muldoon's Diesel Performance.

Warranty is not applicable to trucks with tires larger than 35" unless proof of a differential gear change is provided.

Customer must also change the transmission fluid and filters at approximately 1000 miles. Thereafter, the transmission must have the fluid changed every 15,000 miles.
